# 1.1 Chart of Accounts

---

## Chart of Accounts

The Chart of Accounts is the backbone of your financial system. It organises all financial transactions into a hierarchical structure of groups and ledgers.

### Account Types

- **Assets** – Current Assets (cash, bank, receivables) and Fixed Assets (property, equipment)
- **Liabilities** – Current Liabilities (payables, taxes) and Long-term Liabilities (loans)
- **Equity** – Owner's capital, retained earnings
- **Income** – Revenue from sales, services, and other income
- **Expenses** – Operating expenses, cost of goods sold, administrative costs

### Managing Accounts

- **Group Accounts** – Parent accounts that summarise child ledgers (e.g., "Current Assets" groups "Cash" and "Bank")
- **Ledger Accounts** – Leaf-level accounts where transactions are posted
- Accounts can be **frozen** to prevent further postings
- Set **account currency** for multi-currency ledgers

### How to Create an Account

1. Go to **Chart of Accounts** (via Awesome Bar)
2. Click **Add New Account**
3. Select the parent account and set the account name
4. Choose the account type (Asset, Liability, etc.)
5. Save – the account is ready for transactions

# 1.2 Financial Reports

---

## Financial Reports

CosmOS provides a complete suite of financial reports for management and compliance.

### Standard Reports

- **Profit and Loss Statement** – Revenue, cost of goods sold, and expenses over a period
- **Balance Sheet** – Assets, liabilities, and equity as at a date
- **Cash Flow Statement** – Operating, investing, and financing cash flows
- **Accounts Receivable** – Outstanding customer invoices by ageing
- **Accounts Payable** – Outstanding supplier bills by ageing
- **General Ledger** – All transactions sorted by account and date
- **Trial Balance** – Debit/credit totals for every account
- **Bank Reconciliation** – Match bank statements with system entries

### Running Reports

1. Navigate to the report via Awesome Bar or the Accounts workspace
2. Set the **Company**, **From Date**, and **To Date**
3. Click **Show** to generate
4. Export to **Excel** or **print** the report

### Budgeting

- Create **Budgets** per account/cost center for a fiscal year
- Monitor actual vs. budget variance in real time
- Optional budget control blocks overspending on submission

## 1.3 Journal Entries

---

### Journal Entries

Journal Entries (JV) are the fundamental method for recording financial transactions. Every transaction must have equal debits and credits.

#### When to Use Journal Entries

- Opening balances
- Adjustments and corrections
- Inter-account transfers
- Accruals and prepayments
- Depreciation entries (if not automated)

#### Creating a Journal Entry

1. Go to **Journal Entry** via Awesome Bar
2. Set the **Posting Date**
3. In the Accounting Entries table, add one or more rows:
4. Each row: select **Account**, enter **Debit** or **Credit** amount
5. Optionally set **Party Type** and **Party** for customer/supplier entries
6. Total debits must equal total credits
7. **Save** and **Submit** to post

#### Multi-Currency Entries

If the account has a different currency, CosmOS automatically applies the exchange rate. You can override the rate manually.

# 1.4 Payments

---

## Payments

Payment Entries record money received from customers or paid to suppliers.

### Payment Types

- **Receive** - Customer payments against sales invoices
- **Pay** - Supplier payments against purchase invoices
- **Internal Transfer** - Move money between your own bank accounts

### Payment Modes

- **Cash** - Physical cash transactions
- **Cheque** - Cheque payments with reference number and date
- **Bank Transfer** - Electronic funds transfer
- **Credit Card** - Card payment processing

### Creating a Payment Entry

1. Go to **Payment Entry** via Awesome Bar
2. Select **Payment Type** (Receive/Pay/Internal Transfer)
3. Choose the **Party** (Customer or Supplier)
4. Select **Mode of Payment**
5. Enter the **Amount**
6. Optionally allocate against specific invoices in the References table
7. Select the **Bank Account** or **Cash Account**
8. **Save** and **Submit**

# 1.5 Sales and Purchase Invoices

---

## Sales & Purchase Invoices

### Sales Invoice

A Sales Invoice is raised against a customer for goods or services provided. It updates accounts receivable and income.

- Can be created directly or from a **Delivery Note** or **Sales Order**
- Items are populated from the source document
- Taxes and charges are applied automatically based on the **Tax Template**
- Update **Stock** (if applicable) to reduce inventory on submission
- Print and email directly from the document

### Purchase Invoice

A Purchase Invoice is received from a supplier for goods or services purchased. It updates accounts payable and expenses.

- Can be created from a **Purchase Receipt** or **Purchase Order**
- Set **Bill Date** and **Due Date** for payment terms
- Taxes are applied from the purchase tax template
- Credit and debit notes are available via the **Is Return** checkbox

### Invoice Workflow

1. **Draft** – Enter details, no accounting impact
2. **Submit** – Posts to GL, updates stock (if enabled), sends email
3. **Cancel** – Reverses all accounting and stock entries

## 1.6 VAT

---

### VAT (UAE)

CosmOS supports UAE VAT at the standard rate of 5% with full compliance reporting.

#### VAT Setup

- Configure VAT accounts in the Chart of Accounts (Output VAT, Input VAT, etc.)
- Create **Item Tax Templates** with VAT rate for each item
- Set up **Sales Taxes and Charges Templates** and **Purchase Taxes and Charges Templates**
- Assign templates to customers/suppliers or items

#### VAT Returns

- Go to **VAT Return** under Accounts module
- Select the period (monthly/quarterly)
- CosmOS auto-calculates:
  - Output VAT (sales)
  - Input VAT (purchases)
  - Net VAT payable/receivable
- Generate the return and export for FTA filing

## 2.1 Assets Module

---

### Assets Module

#### Asset Master

- Register fixed assets: equipment, vehicles, buildings, furniture
- Asset category, location, and custodian
- Purchase date, cost, and supplier
- Attach asset images and documents

#### Depreciation

- Straight-line or declining balance methods
- Auto-generated depreciation schedule on submission
- Monthly or yearly depreciation entries
- Pro-rata for partial-year assets

#### Asset Movements

- Transfer assets between employees or locations
- Record asset status (Operational, Under Maintenance, Scrapped)
- Asset Repair log with costs

#### Asset Maintenance

- Schedule preventive maintenance
- Track maintenance tasks and costs
- Assign maintenance teams

## 3.1 Buying Module Overview

---

### Buying & Procurement

#### Suppliers

- Supplier master with contact details, addresses, and payment terms
- Supplier grouping by type and industry
- Scorecard for performance evaluation
- View outstanding bills and payment history

#### Material Request

- Raise requests for materials needed
- Set required date and priority
- Auto-create Purchase Orders from approved requests

#### Request for Quotation (RFQ)

- Send RFQs to multiple suppliers
- Collect and compare quotations
- Select the best offer and create Purchase Order

#### Purchase Order

- Formal order to supplier with items, quantities, prices, and delivery date
- Taxes, shipping, and discounts applied
- Track receipt against order (partial/full)
- Create Purchase Receipt and Purchase Invoice from PO

#### Purchase Receipt

- Record goods received from suppliers
- Updates stock quantities and valuation
- Quality inspection can be triggered on receipt
- Serial/batch numbers captured

## 4.1 CRM & Sales Guide

---

### CRM & Sales Guide

Manage customer relationships and the sales pipeline.

#### Leads

- Capture inbound leads manually or via web forms
- Qualify leads with meeting notes and follow-up schedules
- Convert qualified leads to Opportunities or Customers

#### Opportunities

- Track deals through sales stages (Prospecting, Negotiation, Closed Won/Lost)
- Link opportunities to customers, contacts, and quotations
- Forecast expected revenue

#### Customers

- Maintain customer master with addresses, contacts, and payment terms
- Group customers by territory or industry
- View customer account balance and credit limit

#### Quotations

- Create quotes for customers with items, quantities, and pricing
- Print or email quotations directly from the system
- Convert accepted quotations to Sales Orders

#### Sales Orders

- Confirm customer orders with delivery dates
- Track order fulfilment against deliveries and invoices
- Sales Order items can be partially delivered

#### Sales Analytics

- Sales funnel and pipeline analysis
- Sales person performance reports
- Item-wise and customer-wise sales reports

## 4.2 CRM Module Overview

---

### CRM Module Overview

The CRM module manages the complete sales pipeline from lead generation to order confirmation.

#### Pipeline Stages

1. **Lead** – Initial inquiry or contact
2. **Opportunity** – Qualified lead with potential value
3. **Customer** – Converted and onboarded
4. **Quotation** – Price proposal sent
5. **Sales Order** – Order confirmed

## 4.3 Customers and Quotations

---

### Customers & Quotations

#### Customers

- Customer master with addresses, contacts, and payment terms
- Group by territory, industry, or customer group
- Set credit limits and applicable taxes
- View account balance, ageing, and sales history

#### Quotations

- Create quotes for customers with items, quantities, and pricing
- Apply discounts, taxes, and shipping charges
- Print or email quotation PDF directly
- Track validity period
- Convert accepted quotations to **Sales Orders**

#### Sales Orders

- Confirm customer order with delivery schedule
- Reserve stock (if enabled)
- Partial deliveries allowed
- Link to delivery notes and sales invoices
- Item-wise fulfilment tracking

## 4.4 Leads and Opportunities

---

### Leads & Opportunities

#### Leads

- Capture leads from website forms, events, or manual entry
- Store contact details, source, and notes
- Qualify leads: add meeting notes, follow-up schedules
- Convert to **Customer**, **Opportunity**, or both
- Track lead sources via **Campaigns**

#### Opportunities

- Track deals through defined **Sales Stages** (Prospecting → Negotiation → Closed Won/Lost)
- Set expected revenue and probability
- Link to customer, contacts, and quotations
- Forecasted revenue feeds into sales analytics
- Lost reasons are logged for analysis

## 5.1 Accounting Guide

---

# Accounting Guide

The CosmOS Accounting module provides complete financial management.

## Chart of Accounts

- Hierarchical account structure (Assets, Liabilities, Income, Expenses, Equity)
- Create, rename, or disable accounts as needed
- Accounts can be grouped or ledgers

## Journal Entries

- Record debit/credit transactions directly
- Post inter-company and multi-currency entries
- Reference supporting documents

## Payments

- Record customer receipts and supplier payments
- Reconcile with bank statements
- Payment modes: Cash, Cheque, Bank Transfer, Credit Card

## Sales & Purchase Invoices

- Generate sales invoices against deliveries or directly
- Purchase invoices for supplier bills
- Credit notes and debit notes

## VAT

- UAE VAT-compliant (5% standard rate)
- VAT returns with input/output tax summaries
- Configure VAT accounts and tax templates

## Financial Reports

- **Profit and Loss Statement** – Income vs expenses over a period
- **Balance Sheet** – Assets, liabilities, and equity snapshot
- **Cash Flow Statement** – Operating, investing, and financing activities
- **Accounts Receivable/Payable** – Ageing summaries
- **General Ledger** – All transactions by account

- **Trial Balance** – Debit/credit totals for all accounts

## Budgeting

- Set annual or monthly budgets per account
- Monitor actual vs budget variance
- Budget control on expense transactions (optional)

## 6.1 About CosmOS

---

### About CosmOS

CosmOS is a comprehensive Enterprise Resource Planning (ERP) system designed to streamline your business operations. Built on a powerful open-source framework, CosmOS provides end-to-end solutions across all business functions.

### Key Features

- **Integrated Modules** – Accounts, HR, Payroll, CRM, Sales, Purchasing, Inventory, Manufacturing, Projects, Assets, and Support – all in one platform
- **Real-time Reporting** – Dashboards, financial statements, and live operational reports
- **Multi-Company** – Manage multiple legal entities from a single installation
- **Role-Based Access Control** – Granular permissions per user, role, and document
- **UAE Compliant** – WPS salary file generation, VAT returns, and end-of-service gratuity calculation
- **Workflow Automation** – Approvals, alerts, and automated email notifications
- **Cloud & On-Premise** – Deploy on your own infrastructure or in the cloud

### Navigating CosmOS

- **Awesome Bar** – Press Ctrl+G or Cmd+G to quickly search and navigate to any module, document, or report
- **Workspace** – Role-based landing pages with shortcuts to frequently used features
- **Module Menu** – Grid icon (9 dots) in the top-right corner lists all installed modules
- **Sidebar** – Tree view of modules on the left side of the screen

### Getting Help

- Refer to this User Manual for detailed module guides
- Contact support at [support@cosmoserp.com](mailto:support@cosmoserp.com)
- Report issues via the GitHub issues page

## 6.2 User Manual Index

---

# CosmOS User Manual Index

Welcome to the complete CosmOS User Manual. Select a module below for detailed guidance.

## Getting Started

- [About CosmOS](#) – Introduction, navigation, and key features
- [User Manual Index](#) – You are here

## Core Business Modules

- **Accounts & Finance** – Chart of accounts, journal entries, payments, sales/purchase invoices, VAT, budgets, financial reports
- **HR & Payroll** – Employee master, leaves, attendance, payroll, WPS salary files, gratuity, visa expiry alerts
- **CRM & Sales** – Leads, opportunities, customers, quotations, sales orders
- **Buying & Procurement** – Suppliers, material requests, purchase orders, purchase receipts
- **Stock & Inventory** – Items, warehouses, stock entries, delivery notes, serial/batch tracking
- **Manufacturing** – BOM, work orders, job cards, production planning
- **Assets** – Fixed asset registers, depreciation, maintenance, transfers
- **Projects** – Tasks, timesheets, project costing, and tracking
- **Support** – Issue tracking, SLA, warranty claims

## Administration

- **Settings & Setup** – Company setup, users, roles, permissions, system configuration

## 7.1 Attendance

---

### Attendance

#### Marking Attendance

- **Manual** – Create individual Attendance records
- **Attendance Tool** – Bulk mark attendance for multiple employees in a date range
- **Employee Checkin** – Biometric/device integration or manual check-in/out logs
- **Shift Management** – Assign shifts to employees; auto-calculate early/late arrivals and overtime

#### Attendance Reports

- **Monthly Attendance Sheet** – Summary of present/absent/leave/holiday per employee
- **Attendance Summary** – Aggregate view for payroll processing
- **Overtime Slip** – Computed overtime based on shift schedules

## 7.2 Employee Master

---

### Employee Master

The Employee doctype is the central record for every staff member.

#### Employee Information Sections

- **Personal Details** – Name, date of birth, gender, marital status, nationality
- **Contact** – Email, phone, address, emergency contact
- **Employment** – Employee ID, joining date, employment type, grade, department, designation, reports to
- **Visa Details** – Table of visa records (passport number, visa type, issue/expiry dates, visa documents)
- **Documents** – ID proof, passport, visa, education certificates
- **Education & Experience** – Academic qualifications and work history
- **Bank Details** – Bank name, account number, IBAN for salary transfers
- **Salary Info** – Current salary structure, components, and effective dates

#### Creating an Employee

1. Go to **Employee** via Awesome Bar → **New**
2. Fill in the required fields (Employee Name, Company, Date of Joining)
3. Navigate through the tabs to add all relevant information
4. **Save**

#### Visa Management

Each employee can have multiple visa records (employment visa, dependent visa, visit visa). The **Visa Expiry Alerts** run daily at 6:00 AM and notify HR Managers of visas expiring within 30 days.

## 7.3 Gratuity

---

### Gratuity (UAE)

CosmOS automatically calculates UAE end-of-service gratuity based on the applicable Labour Law rules.

#### Gratuity Rules

- **Limited Contract** – Fixed-term contract termination
- **Unlimited Contract (Termination by Employer)**
- **Unlimited Contract (Resignation by Employee)**

#### Calculation Basis

- Basic salary as the calculation base
- Service period computed from the employee's date of joining
- Different slabs: first 5 years vs. subsequent years
- Daily wage = Basic Salary / 30

#### Generating Gratuity

1. Go to **Gratuity** → **New**
2. Select the **Employee** – service period and basic salary auto-populate
3. Choose the **Gratuity Rule** based on contract type
4. CosmOS calculates the gratuity amount
5. **Save** and **Submit**

## 7.4 HR Module Overview

---

### HR Module Overview

The HR module manages the complete employee lifecycle: from hiring through payroll and separation.

#### Key Features

- **Employee Master** – Personal details, employment history, documents, visa tracking
- **Leave Management** – Leave types, allocations, applications, and balances
- **Attendance** – Daily check-in/out, monthly attendance, shift management
- **Payroll** – Salary structures, payroll processing, salary slips, WPS file generation
- **Recruitment** – Job openings, job applicants, interviews, and offers
- **Performance** – Appraisals, goals, feedback, and KRA tracking
- **Employee Lifecycle** – Onboarding, promotions, transfers, and separation
- **Visa Management** – Multi-visa tracking per employee with 30-day expiry alerts
- **Gratuity** – Automated UAE end-of-service gratuity calculation

## 7.5 Leave Management

---

### Leave Management

#### Leave Types

Define leave types such as Annual Leave, Sick Leave, Casual Leave, and more. Each type has:

- **Max Days** per year
- **Carry Forward** rules (if unused leave rolls over)
- **Encashment** rules (if leave can be cashed out)
- **Earned Leave** auto-accrual per month

#### Leave Allocation

Allocate leave balances to employees for a specific period. Allocations can be done:

- Manually per employee
- Via **Leave Policy Assignment** (bulk allocation using Leave Policies)
- Auto-allocated on employee creation (based on policy)

#### Leave Application

1. Employee applies via **Leave Application**
2. Selects Leave Type, From/To dates, and reason
3. Optional: attach supporting documents
4. **Save** – triggers approval workflow
5. Manager **Approves** or **Rejects**
6. Approved leave deducts from the employee's balance

#### Leave Control Panel

HR users can manage all leave applications, view calendar, and process bulk actions from the Leave Control Panel.

## 7.6 Payroll Processing

---

### Payroll Processing

#### Salary Structure

Each employee is assigned a Salary Structure that defines earning and deduction components:

- **Earnings** – Basic, Housing Allowance, Transport Allowance, Overtime, and other allowances
- **Deductions** – Income Tax, Social Security, Loan repayments, and other deductions
- Components can be fixed amounts or formulas based on other components

#### Payroll Entry

1. Go to **Payroll Entry** → **New**
2. Select the **Company**, **Payroll Period**, and **Posting Date**
3. Click **Get Employees** to fetch employees assigned to the selected salary structure
4. **Process Payroll** – CosmOS calculates each employee's salary based on attendance, leave, and salary structure
5. Review the generated Salary Slips
6. **Submit** to finalise payroll

#### Salary Slip

Each employee receives a Salary Slip showing:

- Earnings breakdown with amounts
- Deductions breakdown with amounts
- Net pay (total earnings minus total deductions)
- Year-to-date totals

#### Additional Salary

Used for one-time payments or deductions outside the standard salary structure (e.g., bonuses, penalties). Added to the next payroll run.

## 7.7 Recruitment

---

### Recruitment

#### Job Opening

Create job postings with:

- Job title, description, and requirements
- Designation, department, and vacancies count
- Publish on the website careers page

#### Job Applicant

- Applicants can apply via the website or be added manually
- Upload CV/resume and cover letter
- Track applicant status: Open, Replied, Interview Scheduled, Rejected, Selected

#### Interview

- Schedule interviews for shortlisted candidates
- Multiple rounds with different interviewers
- Record interview feedback and ratings
- Make hiring decisions (Select/Reject)

#### Job Offer

- Extend offers to selected candidates
- Define offer terms: salary, start date, benefits
- Track acceptance/rejection
- Convert accepted offers to Employee records

## 7.8 WPS Salary File

---

### WPS Salary File (UAE)

The WPS (Wage Protection System) Salary File generates a text file in UAE Central Bank format for salary disbursement through the banking system.

#### Prerequisites

- **Company Bank Account** marked as **Is Company Account** with IBAN and bank code
- **Employee Bank Details** – Each employee must have Bank Name, IBAN, and Account Number in their Employee record
- Payroll processed for the relevant period (or salary amounts known)

#### Creating a WPS Salary File

1. Go to **WPS Salary File** → **New**
2. Select **Company** and **Pay Period**
3. In the **WPS Salary Detail** child table, add rows:
  - Select **Employee** – name and bank details auto-fill
  - Enter the **Salary Amount**
4. Set the **Posting Date**
5. **Submit** – The UAE format text file is automatically generated and attached
6. Download the file from the **Attachments** section
7. Upload the file to your bank or the EWPS portal

#### WPS File Format

The generated file follows the UAE Central Bank format:

- **Header Record** – File type, company code, bank code, total count, total amount
- **Detail Records** – One per employee: employee ID, name, IBAN, bank code, amount
- **Trailer Record** – Total record count, total amount, checksum

## 8.1 HR Module Guide

---

### HR Module Guide

The CosmOS HR module covers employee lifecycle management, from hiring to exit.

#### Employee Master

- Create employees with personal details, contact information, and employment history
- Manage **Visa Details** (passport, visa type, expiry) with automated 30-day expiry alerts
- Track documents, education, and work experience

#### Leave Management

- Define leave types (Annual, Sick, Casual, etc.) with allocation policies
- Employees apply for leave; managers approve or reject
- View leave balance and attendance calendar

#### Attendance

- Mark attendance daily, monthly, or via biometric integration
- Auto-calculate working days and overtime

#### Payroll

- Process monthly payroll with salary structures and earning/deduction components
- Generate salary slips for each employee
- WPS Salary File generation in UAE Central Bank format

#### WPS Salary File

To generate a WPS salary file:

1. Navigate to **WPS Salary File** via Awesome Bar
2. Select the Company and Pay Period
3. Add employee salary details (IBAN, bank account, amount)
4. **Submit** the document – the WPS file is auto-generated and attached
5. Download the file and upload to your bank/EWPS portal

#### Gratuity

CosmOS automatically calculates UAE end-of-service gratuity based on:

- Limited Contract rules
- Unlimited Contract – termination by employer

- Unlimited Contract – resignation by employee

## **Visa Expiry Alerts**

Visa expiry alerts run daily at 6:00 AM. HR users receive email notifications for visas expiring within 30 days.

## 9.1 Manufacturing Module

---

### Manufacturing Module

#### Bill of Materials (BOM)

- Define the recipe for manufacturing finished goods
- List raw materials with quantities and operations
- BOM can have multiple levels (sub-assemblies)
- Set scrap/waste percentage
- BOM versioning and approval workflow

#### Work Order

- Create a production order for a specific quantity of finished item
- Reserve raw materials from warehouse
- Track production status: Not Started, In Progress, Completed, Stopped
- Multiple Work Orders can reference the same BOM

#### Job Card

- Record time and operations performed during manufacturing
- Assign to workers/workstations
- Track completion quantity and scrap
- Auto-create from Work Order

#### Production Planning

- Plan production based on sales orders and forecasts
- Generate Material Requirements Plan (MRP)
- Create Production Plan from Master Production Schedule

#### Routing & Workstations

- Define manufacturing routing (sequence of operations)
- Each operation has a workstation type, time, and cost
- Track machine downtime and efficiency

# 10.1 Projects Module

---

## Projects Module

### Projects

- Create projects with name, start/end dates, and status
- Set project budget and expected revenue
- Assign project manager and team members
- Cost tracking against budget

### Tasks

- Break projects into tasks with assignees and deadlines
- Task dependencies and priority
- Track completion percentage
- Gantt chart view

### Timesheets

- Log hours worked per task/project
- Billable vs non-billable hours
- Link timesheets to salary (if payroll-enabled)
- Generate invoices from billable timesheets

### Project Reports

- Project profitability
- Task completion status
- Timesheet summary by employee
- Budget vs actual cost variance

# 11.1 Company Setup

---

## Company Setup

### Creating a Company

1. Go to **Company** via Awesome Bar → **New**
2. Enter Company Name, Abbreviation, and Domain
3. Select **Country** – this sets default currency, date format, and tax rules
4. Set **Default Currency**
5. Provide **Registration ID** (e.g., Trade License Number)
6. Set **Fiscal Year** start and end dates
7. Optionally upload company logo
8. **Save**

### Company Settings

- Default accounts for different transaction types
- Holiday list for attendance calculations
- Default bank account for payments
- Default terms and tax templates

# 11.2 Users and Permissions

---

## Users & Permissions

### Creating Users

1. Go to **User** via Awesome Bar → **New**
2. Enter Email, Full Name, and temporary password
3. Assign one or more **Roles** (e.g., Accounts User, HR Manager, System Manager)
4. Optionally set module profile for workspace access
5. **Save** – user will receive login credentials

### Roles

CosmOS ships with pre-defined roles:

- **System Manager** – Full system access, all modules
- **Accounts Manager / User** – Finance module access
- **HR Manager / User** – HR and payroll access
- **Sales Manager / User** – CRM and sales access
- **Purchase Manager / User** – Buying and procurement access
- **Stock Manager / User** – Inventory access
- **Employee** – Self-service (leave, attendance, timesheets)

### Permission Rules

- **Role-based** – Users inherit permissions from their roles
- **Document-level** – Define create/read/write/delete/amend/submit per DocType
- **Row-level** – Restrict access to specific records (e.g., only own department)
- Permissions can be set per Company for multi-company setups

# 12.1 Items and Warehouses

---

## Items & Warehouses

### Items

- Create items with name, description, and UOM (Unit of Measure)
- Define item type: **Product** (stocked), **Service**, **Consumable**
- Set default warehouse, valuation method (FIFO/Moving Average)
- Enable serial or batch tracking per item
- Define multiple prices (selling, buying) per UOM
- Item variants for size/colour/configurable attributes
- Attach images and barcodes

### Warehouses

- Create warehouses by location (e.g., Main Store, Warehouse A, Showroom)
- Parent-child hierarchy (e.g., "UAE → Dubai → Main Store")
- Each warehouse tracks its own stock balance
- Store address and contact information
- Warehouse-specific inventory reports

## 12.2 Serial and Batch Tracking

---

### Serial & Batch Tracking

#### Serial Numbers

- Track individual items through their lifecycle
- Each serial number is unique per item
- Capture serials on purchase receipt, delivery note, stock entry
- View serial history: received, transferred, delivered, returned
- Ideal for electronics, machinery, high-value items

#### Batch Numbers

- Track groups of items sharing the same batch/lot
- Capture batch number, manufacturing date, expiry date
- Auto-assign batches from supplier and date
- Ideal for pharmaceuticals, food, chemicals

## 12.3 Stock & Inventory Guide

---

# Stock & Inventory Guide

Comprehensive inventory management for goods and materials.

## Items

- Create items with descriptions, UOM (unit of measure), and pricing
- Track inventory by warehouse location
- Serialised and batch-tracked items supported

## Warehouses

- Define multiple warehouses and store locations
- Hierarchical warehouse structure (parent/child)
- Warehouse-wise stock balance

## Stock Transactions

- **Stock Entry** – Material receipt, issue, transfer, and production
- **Delivery Note** – Dispatch goods to customers
- **Purchase Receipt** – Receive goods from suppliers
- **Stock Reconciliation** – Adjust physical vs system stock

## Inventory Reports

- **Stock Balance** – Current quantity and valuation per item
- **Stock Ledger** – Movement history (in/out/balance)
- **Stock Ageing** – Slow-moving and obsolete items
- **Item-wise Purchase History** – Supplier and price trends

## Serial & Batch Tracking

- Track individual serial numbers for warranty/service
- Batch/lot tracking for expiry-based items
- Serial No and Batch No in all stock transactions

## 12.4 Stock Module Overview

---

### Stock & Inventory Overview

Complete inventory management for goods and materials.

#### Key Features

- **Items** – Product master with descriptions, UOM, pricing, and inventory tracking
- **Warehouses** – Multiple locations with hierarchical structure
- **Stock Transactions** – Receipts, issues, transfers, and adjustments
- **Serial & Batch Tracking** – Individual item traceability
- **Inventory Reports** – Stock balance, ledger, ageing, and valuation

## 12.5 Stock Transactions

---

### Stock Transactions

#### Stock Entry

Used for internal stock movements:

- **Material Receipt** – Receive stock from supplier (or use Purchase Receipt)
- **Material Issue** – Issue stock for consumption or internal use
- **Material Transfer** – Move stock between warehouses
- **Manufacture** – Finished goods from raw materials (or use Work Order)
- **Repack** – Change item composition or packaging
- **Send to Subcontractor** – Issue raw materials to subcontractor

#### Delivery Note

- Dispatch goods to customers against Sales Orders
- Updates stock and accounts (Cost of Goods Sold)
- Create Sales Invoice from Delivery Note
- Packing list for logistics

#### Purchase Receipt

- Receive goods from suppliers against Purchase Orders
- Quality inspection can be conducted at receipt
- Updates stock quantity and valuation

#### Stock Reconciliation

- Adjust physical stock vs system stock
- Used for initial stock setup or periodic counting
- Post positive or negative adjustments

## 13.1 Support Module

---

### Support Module

#### Issues

- Track customer support requests from creation to resolution
- Capture issue description, priority, and type
- Assign to support agents
- Communication thread within the ticket
- Resolution and closure tracking

#### Service Level Agreements (SLA)

- Define response and resolution SLAs per priority
- Auto-assign SLA on ticket creation
- Track SLA breach/escalation
- Reports on SLA compliance

#### Warranty Claims

- Link warranty claims to serial numbers
- Track claim status and resolution
- Replace/repair decision logging
